The best iPad Deals:

There are two iPad models (if you ignore the rest of the range for a moment). The 10th generation iPad has a 10.9-inch display, and the 9th generation iPad, which was released in 2021 and had a 10.2-inch display. The best offers we could find are listed below, but you can read more about them in our special article collecting information about the best iPad 10.9in & 10.2in deals.

Like its predecessor, the ninth-generation iPad has a \$329 starting price; however, the entry-level device has 64GB of capacity rather than 32GB. Best Buy and Target are offering the Wi-Fi base configuration for an all-time low price of \$249.99 (about \$80 off), while Walmart is a close second at \$269 (about \$60 off).

2021 ninth-gen iPad (64GB, Wi-Fi):

The 10.2-inch iPad from Apple will ship in 2021 with an A13 Bionic processor, a 12MP front camera, and compatibility with the company's Center Stage feature. It's the only iPad deals with a 3.5mm earphone port, and it works with the original Apple Pencil and the Smart Keyboard.

iPad Best Price: \$250 Previous Price: \$329

Discount: 24% off

Even though the 10th-generation iPad was released in October, the previous generation is still viable. With a transition to USB-C, uniform bezels without a home button, a side power button with a biometric reader, and a bigger display, the most recent iPad deal innovates the design, but it also removes the headphone port and is more expensive at \$449. That's not much of a starting price, so let's hope the ninth-generation model endures and continues to receive modest discounts.

The best iPad Mini (2021) deals:

The sixth-generation iPad Mini has a bigger screen than the model it succeeds, a top-tier processor, USB-C compatibility, and 5G alternatives. In the process, it gave up the 3.5mm headphone jack and designated home button, but generally, it's a good iPad deal that completely updates Apple's small tablet form factor.

The new 64GB Wi-Fi model now begins at \$499, but the enhancements and modifications to the new iPad Mini come at a higher price. Price increases to \$649 if 256GB of capacity is chosen, while 64GB and 256GB 5G cellular versions

cost \$649 and \$799, respectively. These are significant figures for a small iPad, so the bigger iPad Air might be an option to consider if you'd rather have a larger screen for your money. But this is the place to be if you want Apple's newest products in a more compact size.

iPad Mini (64 GB, Wi-Fi):

iPad Best Price: \$400 Previous Price: \$499

Discount: 20% off

Features:

- Wide-color, 8.3-inch Liquid Retina LCD with True Tone
- Neural engine-equipped A15 Bionic processor
- Apple Pay and Touch ID for safe verification
- 12MP Ultra Wide front and rear cameras with Center Stage
- available in space grey, pink, purple, starry, and purple.
- Exterior audio speakers
- 5G for lightning-fast uploads and live video
- Keep in touch with rapid Wi-Fi 6.
- 10 hours maximum battery life
- USB-C connection for devices and charging
- Integrates the Apple Pencil (2nd generation)
- iPadOS 15 is incredibly powerful, simple to use, and designed for the adaptability of the iPad.

The sixth-generation Mini has recently been marked down significantly by up to \$100, but as of right now, Walmart and Amazon are only selling the 64GB basic model for \$469 (\$30 off). The 256GB Wi-Fi edition is available on Amazon and Walmart for \$617 (\$32 off) if you desire more capacity.

For the 5G version, the 64GB edition is \$50 discounted, bringing the moonlight white new version to \$599 on Amazon. On Amazon, the 256GB model is discounted by \$50, making it \$749. The standard prices for the cellular models are \$749 and \$799, respectively.

The best iPad Air deals (2022):

The most recent iPad Air sale costs approximately \$599, but on this special time it has dropped to \$499.99 (about \$100 off), and that is the price it is currently at on Amazon and Best Buy. That represents an excellent deal for the 10.9-inch tablet, which uses an M1 chipset similar to the more expensive iPad Pro models from the same generation. The 256GB version is also offered for \$649.99 at Best Buy and Amazon (also about \$100 off) for those who need more capacity. That's about as good as it gets for non-cellular iPad Air prices, comparable to the base device.

If you discover that you require a 5G link for your iPad, the cellular edition with 64GB of storage is available at Best Buy and Amazon for \$649.99 (roughly \$100 off).

2022 iPad Air (Wi-Fi):

The most recent iPad Air keeps the design for iPad Pro from the 2020 version but switches to Apple's quick M1 CPU in the replacement of the A14 Bionic processor. It has a 12MP front-facing camera that supports Apple's Center Stage function and is available in one of five colors.

iPad Best Price: \$560 Previous Price: \$600

Discount: 7% off

Features:

- With True Tone, P3 broad color, and an antireflective covering, the 10.9-inch Liquid Retina display
- Neural Engine on the Apple M1 CPU
- Wide-12MP camera
- Center Stage 12MP Ultra Wide Front Camera
- 256GB maximum capacity
- is available in the colors blue, purple, pink, starlight, and space grey.
- speakers in stereo
- Apple Pay and Touch ID for safe authentication
- extended battery life
- data from 5G cellphones and Wi-Fi 6
- USB-C connection for devices and charging
- Works with Apple Pencil, Smart Keyboard Folio, and Magic Keyboard (2nd generation)
- iPadOS 15 is exceptionally strong, simple to use, and made for the flexibility of the iPad.

The best iPad Pro (2022) deals:

Since the alterations are mostly internal, the most recent iteration of iPad Pros resembles the model from 2021 quite a bit. The new Pros are still available in 11-inch and 12.9-inch versions, with the bigger model once again receiving the better-looking Mini LED screen, but both now feature Apple's more recent M2 CPU for even more computing power.

Apart from the superficial similarities to the previous version, there are a few advantages to choosing a Pro over a device like an Air, including Face ID, unlocking and more basic storage. The 12.9-inch model is the one to choose if display quality is the most important consideration in your purchase choice because its Mini LED display gets deeper blacks and greater contrast, much like an OLED screen.

They are very similar to the older models from 2021 aside from that and a cool new hover feature that displays where the tip of your second-generation Apple Pencil will rest before you contact the screen. The 11-inch and 12.9-inch versions of the 128GB basic models are priced at \$799 and \$1,099, respectively, with prices increasing from there. The 11-inch variant begins at \$999, and the 12.9-inch model starts at \$1,299 for the 5G cellular models.

11-inch iPad Pro (2022, Wi-Fi):

The iPad Pro 2022 features a faster M2 CPU, novel hover functionality with the second-generation Apple Pencil, and Wi-Fi 6E compatibility. However, compared to the 2021 edition, its design has not altered.

iPad Best Price: \$1050 Previous Price: \$1099

Discount: 4% off

For instance, the 11-inch M2 iPad Pro with 512GB of capacity is currently on sale on Amazon for about \$50 less, making it available for \$1,049.99. Apart from that, it's a bit of a desert for discounts on the other options, including the cellular models, sadly.

Amazon is currently offering the M2 tablet for \$1,049 (\$50 off) if you prefer the bigger 12.9-inch model with its lovely Mini LED display. The beefier 512GB model is available on Amazon for \$1,349.99 (about \$50 off), or you can step up to the 256GB model for just a \$30 discount at the present price of \$1,169.99.

12.9-inch M2 iPad Pro (2022, Wi-Fi):

iPad Best Price: \$1049 Previous Price: \$1099

Discount: 5% off

The newest iPad Pro from Apple has the same overall appearance as its predecessor, except it has a faster M2 processor and enables Wi-Fi 6E. In comparison to the smaller 11-inch variant, the bigger 12.9-inch edition has a better Mini LED panel.

Features:

- Liquid Retina Display XDR of 12.9" with ProMotion and True Tone
- 8-Core Apple M2 with 256GB of storage
- 10 GPU cores, 16 neural cores
- Only WiFi
- iPad OS

Conclusion:

You simply want to pick up new iPad deals. Many shops sell the most recent and older models that Apple no longer offers, some at discounted rates. No need to think about how much an iPad costs. Buy the affordable model of Apple at a discount and enjoy.
